

Avian Influenza Report

Avian Influenza Report is a weekly report produced by the Surveillance Division of the Communicable Disease Branch of the Centre for Health Protection. This report highlights global avian influenza activity in humans and birds.

VOLUME 20, NUMBER 29

Reporting period: July 14, 2024 – July 20, 2024 (Week 29)

(Published on July 23, 2024)

Summary

1. Since the previous issue of Avian Influenza Report (AIR), there were no new human cases of avian influenza A(H7N9). Since March 2013 (as of July 20, 2024), there were a total of 1568 human cases of avian influenza A(H7N9) reported globally (all were reported in the seven waves between 2013 and September 2019). The latest case was reported on April 5, 2019.
2. Since the previous issue of AIR, there were no new human cases of avian influenza A(H5N6). Since 2014 (as of July 20, 2024), there were 92 human cases of avian influenza A(H5N6) reported globally and 91 of them occurred in Mainland China. The latest case was reported on June 14, 2024.
3. Since the previous issue of AIR, there was one new human case of avian influenza A(H5N1) from the United States of America reported by the U.S. Centers for Disease Control and Prevention. From 2014 to 2023, 0 to 145 confirmed human cases of avian influenza A(H5N1) were reported to the World Health Organization (WHO) annually (according to onset date).* The latest case was reported on July 19, 2024.

* Since November 21, 2012, WHO only publishes information on human cases with avian influenza A(H5N1) infection in “[Influenza at human – animal interface: Monthly Risk Assessment Summary](#)”. Only cases of human infection with H5N1 involved in events that are unusual or associated with potential increased risks will be reported in Disease Outbreak News. The latest [report](#) was published in June, 2024.

This week's highlights

H7N8	1

Table 10. Outside Hong Kong: Confirmed avian influenza A(H5) or other highly pathogenic avian influenza in poultry / wild birds / environmental samples reported in this week – details of reports

Places of Occurrence	Details	OIE Report Date
Canada	Samples from birds in Newfoundland and Labrador, Nova Scotia, Québec and Prince Edward Island were tested positive for highly pathogenic avian influenza A(H5N1) and A(H5N5).	July 15, 2024
	Samples from birds in Manitoba, British Columbia, New Brunswick, Saskatchewan, Alberta and Ontario were tested positive for highly pathogenic avian influenza A(H5N1).	July 15, 2024
Peru	Samples from birds in Cusco were tested positive for highly pathogenic avian influenza A(H5).	July 16, 2024
United States of America	Samples from poultry and birds in Iowa were tested positive for highly pathogenic avian influenza A(H5N1).	July 18, 2024
	Samples from poultry in Colorado, Michigan, Minnesota and New Mexico were tested positive for highly pathogenic avian influenza A(H5N1).	July 18, 2024
	Samples from birds in Idaho and Maine were tested positive for highly pathogenic avian influenza A(H5N1).	July 18, 2024
Australia	Samples from poultry in Victoria were tested positive for highly pathogenic avian influenza A(H7N3).	July 19, 2024
	Samples from poultry in New South Wales were tested positive for highly pathogenic avian influenza A(H7N8).	July 19, 2024
Bhutan	Samples from poultry in Samtse were tested positive for highly pathogenic avian influenza A(H5N1).	July 19, 2024
France	Samples from birds in Normandie and Bretagne were tested positive for highly pathogenic avian influenza A(H5N1).	July 19, 2024
Taiwan	Samples from poultry in Yunlin County were tested	July 19, 2024

Places of Occurrence	Details	OIE Report Date
	positive for highly pathogenic avian influenza A(H5N1).	

For cumulative reports of avian influenza A(H5) or other highly pathogenic avian influenza in poultry / wild birds, please refer to the [WOAH](#) website.
